

PRESS RELEASE

A strong partnership for caregivers in geriatric care allows more time for real caring.

Heidelberg, April 27th, 2022

Nordic company NEMLIA and Develco Products from Denmark have teamed up to help caregivers spend more time on what matters most: caring! NEMLIA and Develco Products will be on site together at the Altenpflege-messe in Essen between April 26th and 28th, 2022. This fair is the starting signal for their cooperation. Through innovative products, both companies create a synergy through increased transparency of the nursing processes offers enormous relief for nursing staff.

Working in the healthcare industry is often stressful and caregivers are under a lot of pressure. This is exactly where IoT technology comes in. The goal is to reduce the workload and stress of caregivers, so that caregivers have more rest and time for care and nurturing. Digitization can help to optimize processes and build a solid infrastructure. It helps to put people in need of care back in focus. The cooperation between the company NEMLIA, which specializes in technological systems in the healthcare market, and the company Develco Products, which manufactures individualized, wireless products in the areas of security, home care and insurtech, among others, offers holistic solutions that enable humanitarian care.

Reduction of routine checks and more time for the patient

NEMLIA's solutions offer the caregiver a less stressful environment and therefore a better quality of life for the elderly. Developed by caregivers for caregivers, NEMLIA's software and services are used in care homes and private homes. The comprehensive Talva app and integrated notification service provide caregivers with a quick and easy overview of resident safety and activities. In order to be able to plan care in facilities more efficiently, information about changed circumstances is passed on to the caregivers via push notifications. This can, for example, reduce time-consuming routine checks. NEMLIA's solutions also include the Squid.link gateways from Develco Products. Thus, the Internet connection can be reliably guaranteed via WLAN or a SIM card for mobile networks. This is especially essential for providing real-time updates and responding to critical issues. Thanks to the close partnership with Develco Products, NEMLIA supports nursing staff in their everyday requirements like a digital assistant.

Use the technologies of tomorrow today

Not only NEMLIA is enthusiastic about the cooperation, Develco Products is also looking forward to the future collaboration. In an interview, the Managing Director of Develco Products, Karsten Ries, explains:

"By using IoT products in essential areas such as care, they make an important contribution to digitization and bring great added value for customers and users. Together with strong industry partners like NEMLIA, we bring our strengths together for exactly that purpose; to offer customers the reliable solutions they need."

Peer Bentzen (CEO of NEMLIA) is just as enthusiastic about the cooperation:

"With strong partners like Develco Products, we bring solutions for the care sector to the market that are reliable and trustworthy. We know that the everyday life of nursing staff and nursing home management is very often characterized by pressure, lack of resources and stress. Our solutions can help reduce that burden and stress for caregivers, allowing them to spend much more time where care is needed."
